

The “Continual Trials” cNOR-OL and WWW Chamber:

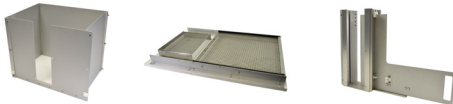

An Open and Modular Design

Starting with a manual chamber, the system can be further optimized into a PC-controlled automation of multiple networked chambers.

Stage 1

Object chamber, Home chamber, Standard floor, and Manual gate

Stage 2

Four-stage Timer for Manual gate with White noise generator

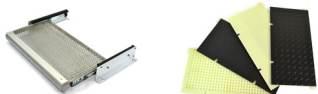

Stage 3

Scoring camera and video scoring application

Easily network multiple chambers using a single PC

Even More

Context floors for WWW / OPC trials

Gantry for Tethered animals

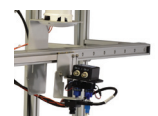

Reward

Auto gate

PC control and automation

Optogenetics
